

# OPAIR

## Wheelchair bike

The OPair is a wheelchair bike with which you can transport a wheelchair user. A seat for the wheelchair user/passenger is affixed to the front of the bike. From the back, the cyclist has an overview of the road and view on the passenger. On the split frame version, the front part is easy to remove from the cycling component, which enables use as a wheelchair on location. The slightly angled front wheels provide increased driving comfort and stability. The depth adjustable seat of the OPair can be set to the passenger's measurements as well as the angle adjustable back rest and expandable side rests. There are also options for side rests, making the bike suitable for both children and small adults. The bike can be altered completely with a variety of options. A personal seat can be affixed to the bike. Options can be found on the options tab on this page. The optional electric motor provides support while cycling.

### SUITABLE FOR:

Cycling with children or adults, who cannot cycle on their own due to disability, and can make an easy transfer.
